

Amendments to the Specification:

Please replace the paragraph bridging pages 10 and 11 with the following amended paragraph:

As seen most clearly in Fig. 3, lower housing ~~13~~ 15 is preferably in the form of an integral piece which can be manufactured using conventional injection molding techniques. Lower housing ~~13~~ 15 is generally annular in lateral cross-section and includes a substantially flat top surface 21 and a substantially flat bottom surface 23. A shallow circular recess 25 is formed in the majority of top surface 21 which, in turn, serves to create a thin flange, or wall, 27 that defines the outer periphery of recess 25. The front end of flange 27 is shaped to define a thin lateral slot 28 which can be used to lockably retain upper housing 17 in its closed position, as will be described further in detail below.
